DETAILED ACTION

Claim Objections

Previous objection to claim 8 is now withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6, 8, 9 and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Pedersen et al. (US Pat. #5675180).

Regarding claim 1, Pedersen teaches a method of forming a semiconductor package comprising the acts of:

Forming a die stack, wherein the die stack is formed such that the die in the stack are electrically [fig. 10a, 130] and mechanically [column 9, lines 23-30-] coupled together before placing the die stack on a temporary holding surface [column 10, lines 48-51, after epoxy is applied the stacks are moved to a holding area and placed in an oven]

Picking a die stack[fig. 11, 112] from a temporary holding surface [from the previously mentioned curing oven and holding area]; and

Placing the die stack on a substrate [fig. 12, 150].

Regarding claim 2, Pedersen discloses the method, as set forth in claim 1, comprising the act of curing the die stack before the act of picking a die stack [column 9, lines 37-39].

Regarding claim 3, Pedersen teaches the method, as set forth in claim 1, comprising the act of testing the die stack before the act of picking a die stack [column 8, lines 50-52].

Regarding claim 6, Pedersen discloses the method, as set forth in claim 1, wherein the act of picking the die stack from a temporary holding surface comprises the act of picking the die stack from a tray [column 10, lines 48-51, the oven or holding area can be considered a tray].

Regarding claim 8, Pedersen teaches the method, as set forth in claim 1, wherein the die stack comprises at least two semiconductor die [column 9, lines 26 and 27, 6 dies].

Regarding claim 9, Pedersen discloses the method, as set forth in claim 1, wherein the die stack comprises at least three semiconductor die [column 9, lines 26 and 27, 6 dies].

Regarding claim 18, Pedersen teaches the method as set forth in claim 1, comprising the act of using the die stack on the substrate to form an integrated circuit package [column 1, lines 5-25, the Pedersen patent is directed at creating high density integrated circuit packages].

Art Unit: 2823

Regarding claim 19, Pedersen teaches the method as set forth in claim 18, comprising the act of electrically coupling the integrated circuit package to a processor form an electronic system [column 12 lines 1-10].

Regarding claim 20, Pedersen teaches the method, as set forth in claim 1, wherein at least one die in the die stack comprises a memory die [column 4, lines 5 and 6]

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4,5,7 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pedersen et al. (US Pat. #5675180).

Regarding claim 4, Pedersen fails to teach the temporary holding surface is a tape reel, however the use of tape reels are common in die transfer processes. The examiner takes official notice that tape reels were known to be used as a temporary holding surface of a die stack at the time of applicant's invention.

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of what is well known in the art into the method of Pedersen by using a tape reel for holding a die stack. The ordinary artisan would have

Art Unit: 2823

been motivated to modify Pedersen in the manner set forth above for at least the purpose of using a well known and established method of holding a die stack.

Regarding claim 5, Pedersen fails to teach the temporary holding surface is a gel pack, however the use of gel packs are common in die transfer processes. The examiner takes official notice that gel packs were known to be used as a temporary holding surface of a die stack at the time of applicant's invention.

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of what is well known in the art into the method of Pedersen by using a gel pack for holding a die stack. The ordinary artisan would have been motivated to modify Pedersen in the manner set forth above for at least the purpose of using a well known and established method of holding a die stack.

Regarding claim 7, Pedersen fails to teach the temporary holding surface is a wafer, however the use of wafers are common in die transfer processes. The examiner takes official notice that wafers were known to be used as a temporary holding surfaces of die stacks at the time of applicant's invention.

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of what is well known in the art into the method of Pedersen by using a wafer for holding a die stack. The ordinary artisan would have been motivated to modify Pedersen in the manner set forth above for at least the purpose of using a well known and established method of holding a die stack.

Regarding claim 17, Pedersen discloses the method as set forth in claim 1, comprising the acts of:

Art Unit: 2823

Applying a first adhesive between each die in the die stack [column 9, line 25]; and

Applying a second adhesive between the die stack and the substrate [column 11, lines 4-6]

Pedersen fails to teach the specific temperatures at which the first and second adhesives are cured as well as the second adhesive being curable at a second temperature lower than the first temperature. However, he does disclose a 60 minute cure time for the first epoxy [column 9, line 38] and a calls the second epoxy fast curing [column 11, lines 4-6]. The 60 minute cure time along with a cool down period implies a raised temperature for curing while a fast-curing positional epoxy without any specific cure time or cool down implies the epoxy cures at room temperature which is lower than the first epoxy.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pedersen et al. (US Pat. #5675180) in view of Huang et al. (US Pat. #6753205).

Regarding claim 10, Pedersen fails to teach a die stack formed in a shingled configuration. However, Huang discloses an integrated circuit package with a shingled configuration [fig. 2 and 5].

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of Huang into the method of Pedersen by stacking the chips in a shingled configuration. The ordinary artisan would have been motivated to modify Pedersen in the manner set forth above for at least the purpose of

Art Unit: 2823

being able to package integrated circuit chips of various relative sizes [column 2, lines 45-47].

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 2823

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1,5,7-9 and 11-16 rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6682955. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of patent '955 encompass the same scope as the cited claims of the instant application.

Response to Arguments

Applicant's arguments with respect to claims 1-3, 6, 8, 9 and 18-20 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2823

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John M. Parker whose telephone number is 571-272-8794. The examiner can normally be reached on Monday - Friday 8am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew S. Smith can be reached on 571-272-1907. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
